Notes:

Self-Editing Your Static Website

Static Websites offer no user-editing capability as standard. However, we can integrate a CMS (Content Management System) into any static site built by Kikk. This enables website owners to make simple text changes and add images to pre-defined areas - great for websites that have just a few areas that need frequent simple edits. A **Basic Licence** allows editing of text and images. A **Pro Licence** adds greater versatility including Photo Galleries and Blogs.

Self-Editing Your WordPress Site

WordPress is a CMS (Content Management System) that converts database content to web files. Having this CMS allows users to make changes without ever looking at a string of code or navigating around web folders. The entire website back-end is available via online log-in, and different user access levels are supported. We do not offer training on WordPress editing but can point you to video courses on the specific page builders we use.

WordPress Maintenance

It is vitally important that WordPress installations are kept up to date, and constantly monitored for security threats. Hence, at Kikk, we offer **Fully Managed WordPress Hosting** to keep the installation, plug ins, theme and security fully up to date, and ensure that any software conflicts are resolved, particularly following updates.

If you are technically inclined you may undertake these updates yourself and pay for just the hosting element. However, for the integrity of our server environment, we insist that updates are taken care of on a very regular basis. Out of date installations will lead to intervention by Kikk support without notice - work which is chargeable.

Email

You can choose to have email on your web server or have it hosted on a dedicated mail server. Both options are perfectly reliable although some argue that it is better to host email independently from your website for reasons of reliability and deliverability.

All our email packages are based on space used, and allow for multiple mailboxes. If you require just one mailbox with a lot of space it may be better to look at MS Exchange or Gmail for business. However, if you want multiple mailboxes with less space, we offer better value.

All hosting packages come with a single mailbox and 2GB space as standard, hosted on the web server.

Domain registration

You can register domains yourself or through Kikk. The latter option means that we have easy access if DNS changes are needed, and we will take care of renewals. Whilst the domains may be registered to Kikk we guarantee to recognise your ownership and not obstruct any transfers if required. Domains can be renewed annually or for annual periods up to 10 years.
